

DANDI BIYO RULEBOOK – FINAL v1.0 (RAG-FRIENDLY)

1. INTRODUCTION

Dandi Biyo is a traditional Nepali field sport played using a long stick (**Dandi**) and a short-pointed pin (**Biyo**).

This rulebook consolidates traditional gameplay with modern standardization, using explicit dimensions, deterministic scoring logic, and stable terminology suitable for **RAG systems, simulations, AR/VR applications, and digital officiating.**

2. EQUIPMENT SPECIFICATIONS

2.1 Dandi (Stick)

- Length: **45 cm**
- Grip section:
 - Length: **5 cm**
 - Grip depth: **0.5 cm**
- Striking end:
 - Tip taper: **0.5 cm**
 - Carved striking surface length: **2 cm**

2.2 Biyo (Pin)

- Length: **15 cm**
 - Shape: **Cylindrical**
 - Both ends tapered:
 - Taper length: **0.5 cm per end**
-

3. PLAYING FIELD DIMENSIONS

- Field length: **~10 m**
- Base shape: **square box**
- Hole (**Khop**) placement:
 - Located **at the starting square**, on the edge from which the fan expands.
- Hole dimensions:
 - Length: **4 inches**
 - Depth: **6 inches**

3.1 PLAYING FIELD SHAPE (STANDARDIZED LAYOUT)

The Dandi Biyo field follows a **composite geometric layout** consisting of a **central square**, **two connecting paths**, and a **fan-shaped landing zone area**.

3.1.1 Central Square (Hitting Zone)

- Shape: **Square**
- Function:
 - Contains the **Khop**
 - Used for **Hutnu** and **Tyak**
- Acts as the **origin point** for scoring and measurements.

3.1.2 Connecting Paths (Running Paths)

- Number of paths: **2**
- Shape: **Rectangular**
- Orientation:
 - Extend outward from the **central square**
- Function:
 - Used by the hitter to run toward **safe zones**

3.1.3 Safe Zones (Running Zones)

- Each path contains **three sequential safe zones**
- Total safe zones: **6**

Safe Zone Position Points

Safe Zone 1 Nearest 2

Safe Zone 2 Middle 4

Safe Zone 3 Furthest 6

- Only the **furthest safely reached zone** is scored.

3.1.4 Fan-Shaped Landing Zone Area

- Shape: **Fan (sector-shaped)**
- Origin:

- Expands outward from the **central square**
- Function:
 - Determines **Landing Zone Points**

Zone Structure

- The fan consists of **7 arced radial zones**
- Zones are numbered:
 - **Zone 0 to Zone 6**
- Zones are defined by **concentric arc boundaries**, increasing in distance from the central square:
 - **Zone 0** → Closest arc
 - **Zone 6** → Furthest arc

Scoring Rule

- The **zone where the biyo first lands** determines the landing zone score.
- If the biyo contacts multiple zones, the **first point of contact** is used.

Boundary Rule

- Any biyo landing **outside Zone 6** is a **boundary violation** and results in:
 - **OUT**
 - **No score**
-

4. TEAM STRUCTURE

- Total teams: 2
 - **Dandi Team (Hitting Team)**
 - **Biyo Team (Fielding Team)**
 - Team size:
 - **5 active players**
 - **2 substitutes**
-

5. GAME OFFICIALS

- **1 Referee**
 - **1 Scorekeeper**
 - **1 Timekeeper**
-

6. CORE GAMEPLAY MECHANICS

6.1 Hitting the Biyo (Hutnu)

- The hitter places the biyo in the khop.
 - The biyo is struck using the dandi.
 - Objective:
 - Propel the biyo as far as possible
 - Keep the biyo within field boundaries
-

6.2 Returning the Biyo (Defending)

- The Biyo Team positions fielders strategically.
 - If a fielder strikes the flying biyo and it returns into the khop, the hitter is **OUT**.
-

6.3 Fielding and Throwing

- If a fielder catches the biyo in the air, the hitter is **OUT**.
 - If the biyo lands:
 - Fielders may throw the biyo toward the dandi.
 - If the thrown biyo hits the dandi, the hitter is **OUT**.
-

6.4 Tyak (Tapping Mechanic – Zone Multiplier)

- If the hitter is **not OUT** after Hutnu, the hitter may perform **Tyak**.
- Tyak involves tapping the biyo upward repeatedly using the dandi.

Tyak Scoring

Tyak Score = 2 × Landing Zone Points

Example

- Zone value = 3
- Tyak score = **6 points**

Tyak Out Conditions

- Biyo caught during Tyak → **OUT**
 - Zero successful Tyak → **OUT**
 - Boundary violation → **No Tyak score**
-

7. SCORING SYSTEM (ZONE + SAFE ZONE BASED)

7.1 Hutnu Scoring Formula

Hutnu Score = Landing Zone Points + Safe Zone Points

7.2 Landing Zone Points

- The field is divided into numbered landing zones
 - Points are awarded based on **first landing position**
-

7.3 Safe Zone Points

- After Hutnu, the hitter may run to a safe zone.
 - Two running paths, each with three safe zones.
 - Only the **furthest successfully reached safe zone** is counted.
 - Failure to reach any safe zone → **0 points**
-

7.4 Combined Scoring Example

- Biyo lands in **Zone 3** → 3 points
- Hitter reaches **Safe Zone 2** → 4 points

Total Hutnu Score = 7 points

7.5 Scoring Priority Order

1. **Hutnu score**
 - Safe Zone Points
 - Landing Zone points
 2. **Tyak score (if performed)**
 - 2 × Landing Zone Points
-

7.6 Scoring Validity

- Points are awarded **only if the hitter is not OUT**
 - Boundary violation → **No score**
-

8. OUT CONDITIONS

A hitter is declared **OUT** if:

1. Biyo returns into the khop during flight
 2. Thrown biyo hits the dandi
 3. Zero successful Tyak
 4. Biyo is caught by a fielder
 5. Boundary violation
-

9. TIME RULES

- Each team receives **30 minutes of hitting time**
 - If a hitter is out:
 - The next hitter rotates in
 - Rotation continues until time expires
-

10. SAFETY RULES

- Mandatory protective equipment:
 - **Helmet**
 - **Gloves**
-

11. MODERN STANDARDIZATION

- Standardized by:
 - **Nepal Dandi Biyo Association (2055 BS)**
 - Uses:
 - Official score sheets
 - Player performance records
-

12. RAG STRUCTURE NOTES

- Modular, chunkable sections
- Explicit numeric dimensions
- Deterministic scoring logic
- Stable terminology
- Suitable for:
 - AI retrieval

- AR field visualization
 - Digital refereeing
 - Simulation engines
-

13. GLOSSARY

- **Dandi** – Long stick
 - **Biyo** – Pointed pin
 - **Khop** – Hole
 - **Tyak** – Tapping the biyo upward
 - **Hutnu** – Hitting
 - **Tolnu** – Striking the dandi with the biyo
-
